START TRADING

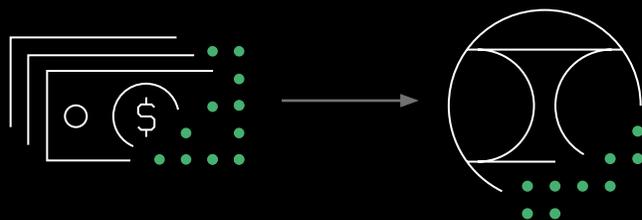

REWARD INSTEAD OF COMMISSION

Earn rewards on every time-limited order.

Ex. 1 – earn \$8 for placing a 1-day sell order on ETH at a price \$50 higher than the market,

Ex. 2 – earn \$1000 for a 7-day buy order on BTC at a price \$1500 lower than the market, whether executed or not.

PROFIT SHARING WITH USERS

We earn from users' orders. 96% of income is allocated to the buyback of pool and governance tokens, which supports their value.

DEVELOPMENT POOL

Remaining revenue (4%) funds development of the project.

ORDER POOL

ORDER POOL

Users' assets from orders are kept in the Order Pool, separate from the Treasury Pool. Each order is represented by a unique NFT.

TREASURY POOL

TREASURY POOL

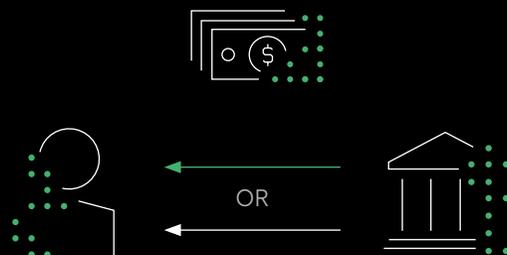

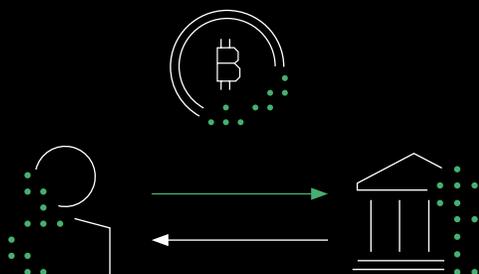

Profits are collected in the Treasury Pool, used for settling orders and supporting the token's value. The pool could also be utilized for offering swaps.

BTC Price: 44 000 USD

order to sell 1 BTC at 46 000 USD

Day 1

Day 7

TRANSACTIONS ON BRIGHTPOOL

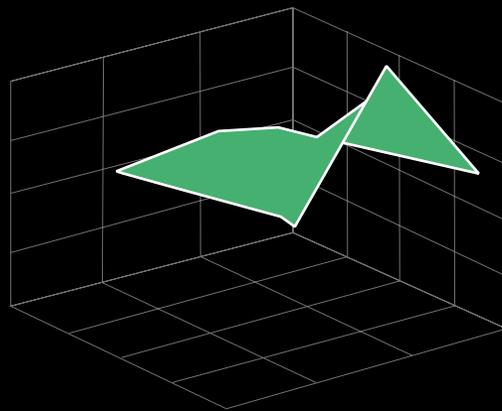

1. Place a sell order for 1 BTC at \$46,000 while the market price is \$44,000.
2. Receive a \$1,000 reward regardless of the order's execution.
3. Assets remain locked for 7 days and at the order's expiration:
 - If BTC is at or above \$46,000, the order executes at \$46,000.
 - If BTC is below \$46,000, you get your BTC back.

NOBEL PRIZE

We utilize the Nobel Prize-winning Black-Scholes model for pricing derivatives, a method trusted by major investment banks.

AI-DRIVEN

Rewards are priced by our AI-driven Black-Scholes model (BS.AI), continuously learning from on-chain data.

HOW TO ESTIMATE THE PROFIT

THE POWER OF CONSISTENCY

BS.AI calculates trade rewards based on the expected profit. Orders are priced using BS.AI, with payouts in pool tokens that support the token's value.

Issued tokens are value-backed; the valuation of each order underpins their worth.

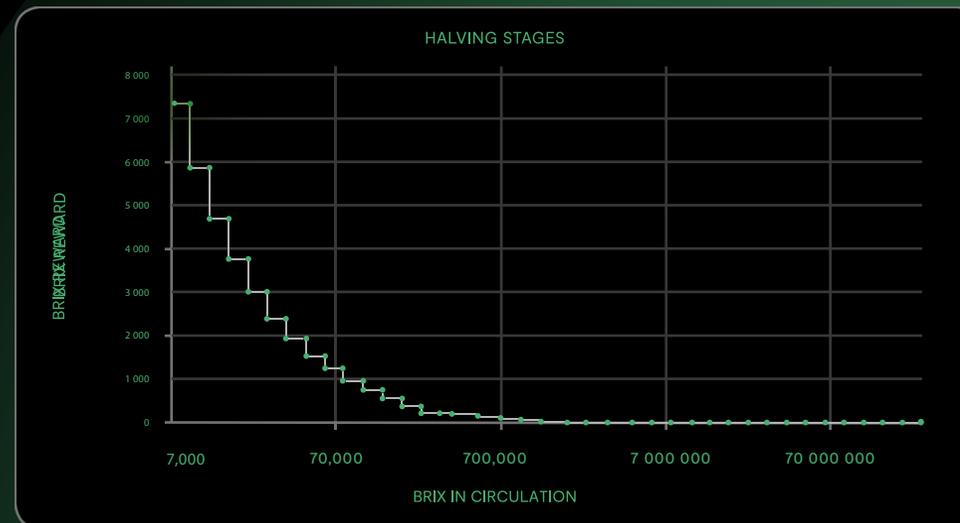

BRIX – TOKEN OF THE ETH POOL

- Orders in the first pool are rewarded with BRIX tokens.
- BRIX buybacks are initiated when its price dips below the BS.AI model's valuation.
- Cancel orders pre-settlement by burning BRIX tokens, with a fee set by the BS.AI model.
- Can be used to execute swaps from the Treasury.
- APR for orders ranging 50-500% p.a.

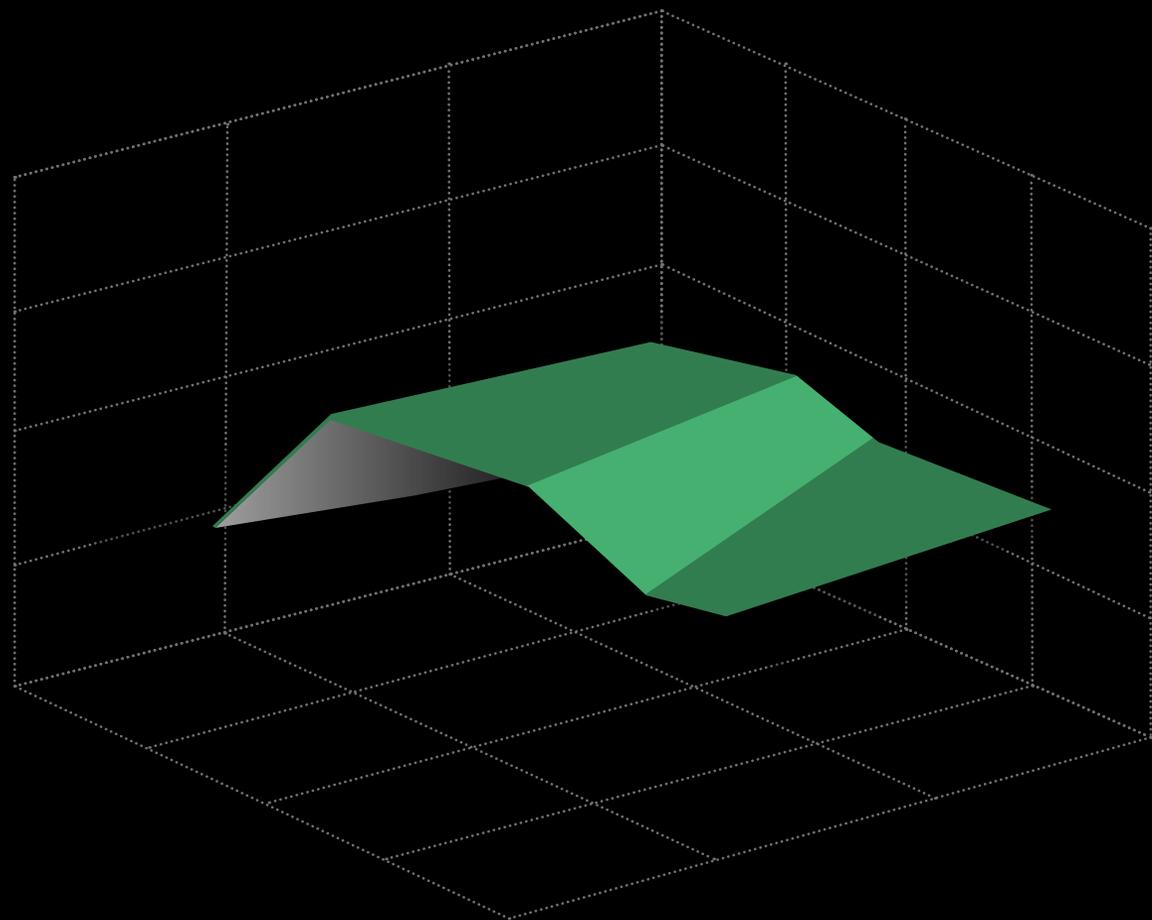

HALVING MECHANISM

Rewards decrease through a steady reduction algorithm, similar to Bitcoin's halvings – see the HALVING STAGES graph.

Early adopters earn more. The BRX PERFORMANCE chart illustrates the value increase calculated by the BS.AI model.

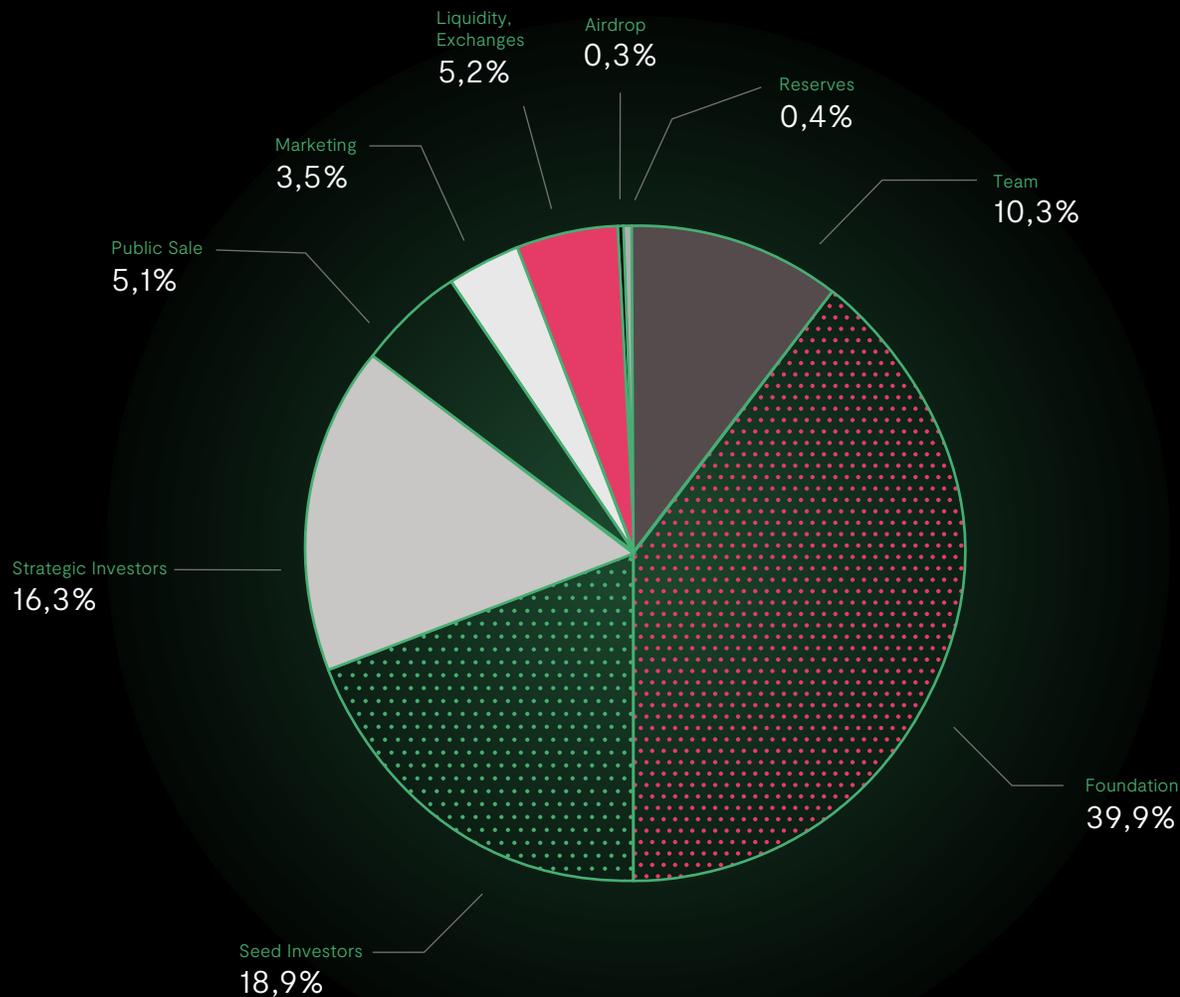

VOLATILITY

- BRIX token's value is tied to Ethereum's volatility.
- Greater volatility leads to a higher token value.
- BRIX would serve as the Volatility Index for ETH, similar to the VIX for the S&P 500 index.

Conclusion: Market extremes, be it a crash or boom, present unique additional opportunities. High volatility significantly boosts potential gains, positively impacting the project's value and prospects.

Total Token Supply

Starting at 2^{26} (67M) BRI tokens without minting options, the supply will be gradually burned down to 2^{10} (1024), concentrating the governance power.

- Initial Market Cap – 300k USD
- Total Diluted Market Cap – 10 066 329 USD
- Initial Circulating Supply – 1.5M

The BRI governance token grants voting rights on the project's direction. The BS.AI model employs buy-back and burn strategies, using transaction profits to ensure that token scarcity matches the volume growth.

TOKEN UTILITY

BRI tokens fuel the platform, with a burning mechanism enabling their use in:

- Executing crypto swaps from the Treasury,
- Cancelling orders within pools,
- Increasing rewards,
- Establishing and granting early access to new pools,
- Utilizing the BS.AI model for external uses.

**TESTNET
& AIRDROP**

The platform's DEMO is LIVE for you to test it & there's an airdrop campaign coming soon.

02

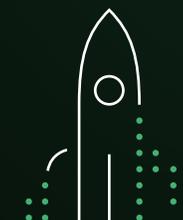

IDO

Brightpool will launch its Initial DEX Offerings on a few platforms.

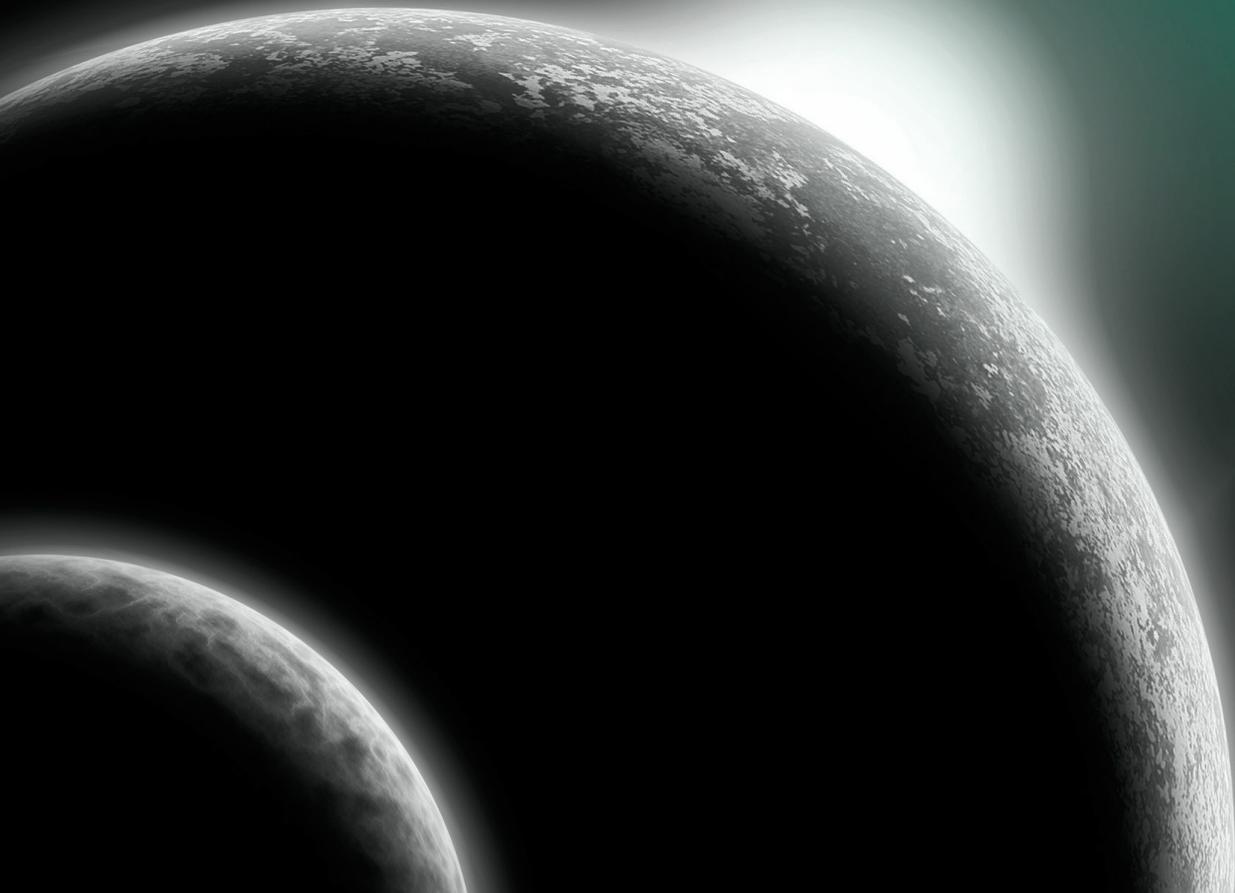

03

LAUNCH

The launch is preceded by a contest campaign where users get prizes for testing the platform.

LONG

TERM

V I S I O N

A PLATFORM WITH LIMIT ORDERS, PRICE FREEZING & SWAPS.

Brightpool's Treasury Pool enables swaps without the need for LPs and offers price freezing, allowing users to lock in a price, such as ETH at \$2500, for 30 days. Profits are redistributed through the buyback of BRI and pool tokens.

GOVERNANCE

Brightpool's liquidity includes tokens from all traded pairs. We invite external projects to create their pools using our BS.AI model, with commissions supporting BRI tokens buybacks.

Q1 2024
