Low Liquidity
Matching each conditional order
is difficult in fragmented
markets

Limited Target Group
High complexity limits
accessibility

Complicated Terminology
Specialized terms are a barrier

Confusing
Thousands of combinations

Overwhelming UI/UX
Hard to use and understand

SOLUTION

**Conditional Execution Made Simple, It Feels
Like Magic.**

Familiar, User-Friendly Interface. Absolutely Zero Fees.

INCENTIVIZED LIMIT ORDERS

THE “MAKER” SIDE

Place a free limit order with expiry, get an upfront bonus

PARAMETRIC PRICE LOCKS

THE “TAKER” SIDE

Lock in an asset's spot price for a set time

INCENTIVIZED LIMIT ORDERS

Place 1 day limit order to buy ETH at \$2300

BID 2 EARN Buy Sell

Buy
1 ETH
Ethereum

Price
2 300 USDT
Tether (market price: 2 351.06)

Execution time
05.10.2024 | 10:05:09 1 day

Order value \$2 300, BRIX mint \$16.97
Traffic ratio: x1.00. APR 255%

ORDER & MINT 137.7817 BRIX

Get \$17 worth bonus, pay 0% commission

If market price is under \$2300 buy;
otherwise, keep USDT

PARAMETRIC PRICE LOCKS

Today's price \$5700

1 \$BRIX

24h

FREEZER SPELL Buy Sell

Freeze to sell [Ⓞ] 1
bWETH \$5700

Price 5700
bUSD market price \$5700

Spell window
Day to execute the order
1 day

Fee 1 \$BRIX
You can sell 1 ETH for \$5700 within 1 day

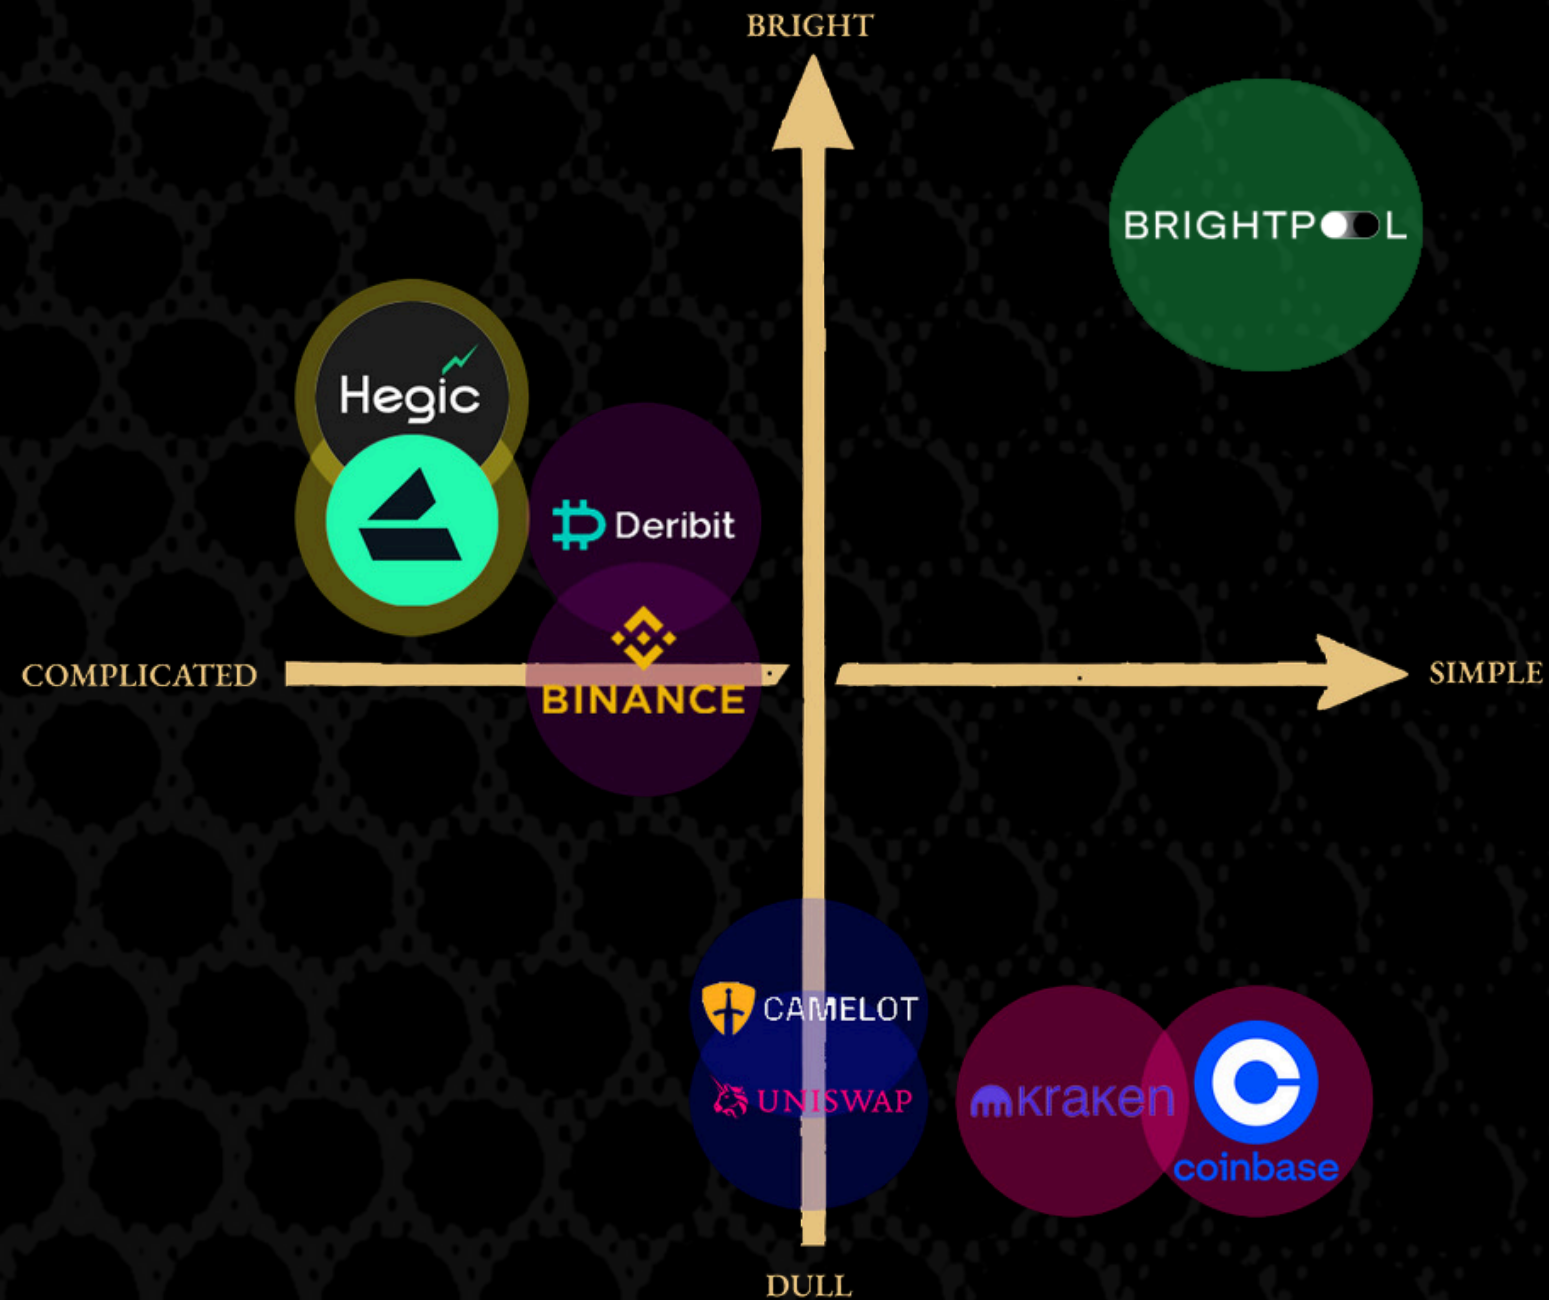

Freeze \$5700 price

Trade at \$5700
(regardless of market)

CRYPTO MARKET

Bright and Simple Trading – Bridging the Market Gap

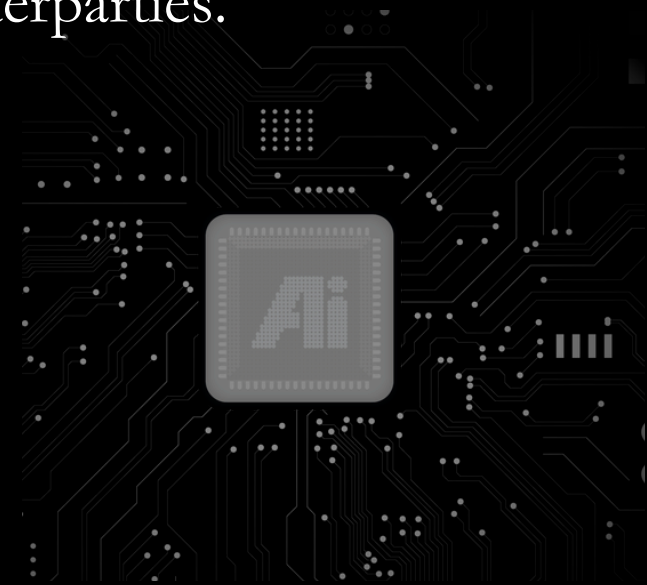

Current solutions are limited, we deliver simplicity and brilliance.

HOW WE DID IT

B S . A I

We have developed an autonomous on-chain pricing engine powered by our AI. It leverages advanced stochastic calculus and probabilistic mathematical models (inspired by Nobel-winning frameworks) to dynamically balance the network. It completely eliminates the need for centralized market makers or counterparties.

\$ B R I X

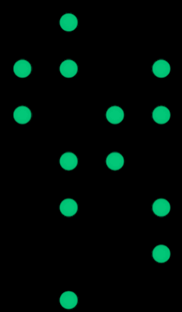

We use \$BRIX token as premiums, thereby eliminating the need to manage risk. \$BRIX operates on a 45-stage halving model, where rewards decrease by 20% at each stage for the same order. This ensures that the fundamental value of \$BRIX is constantly increasing, supporting its market price.

P R O O F - O F - R I S K

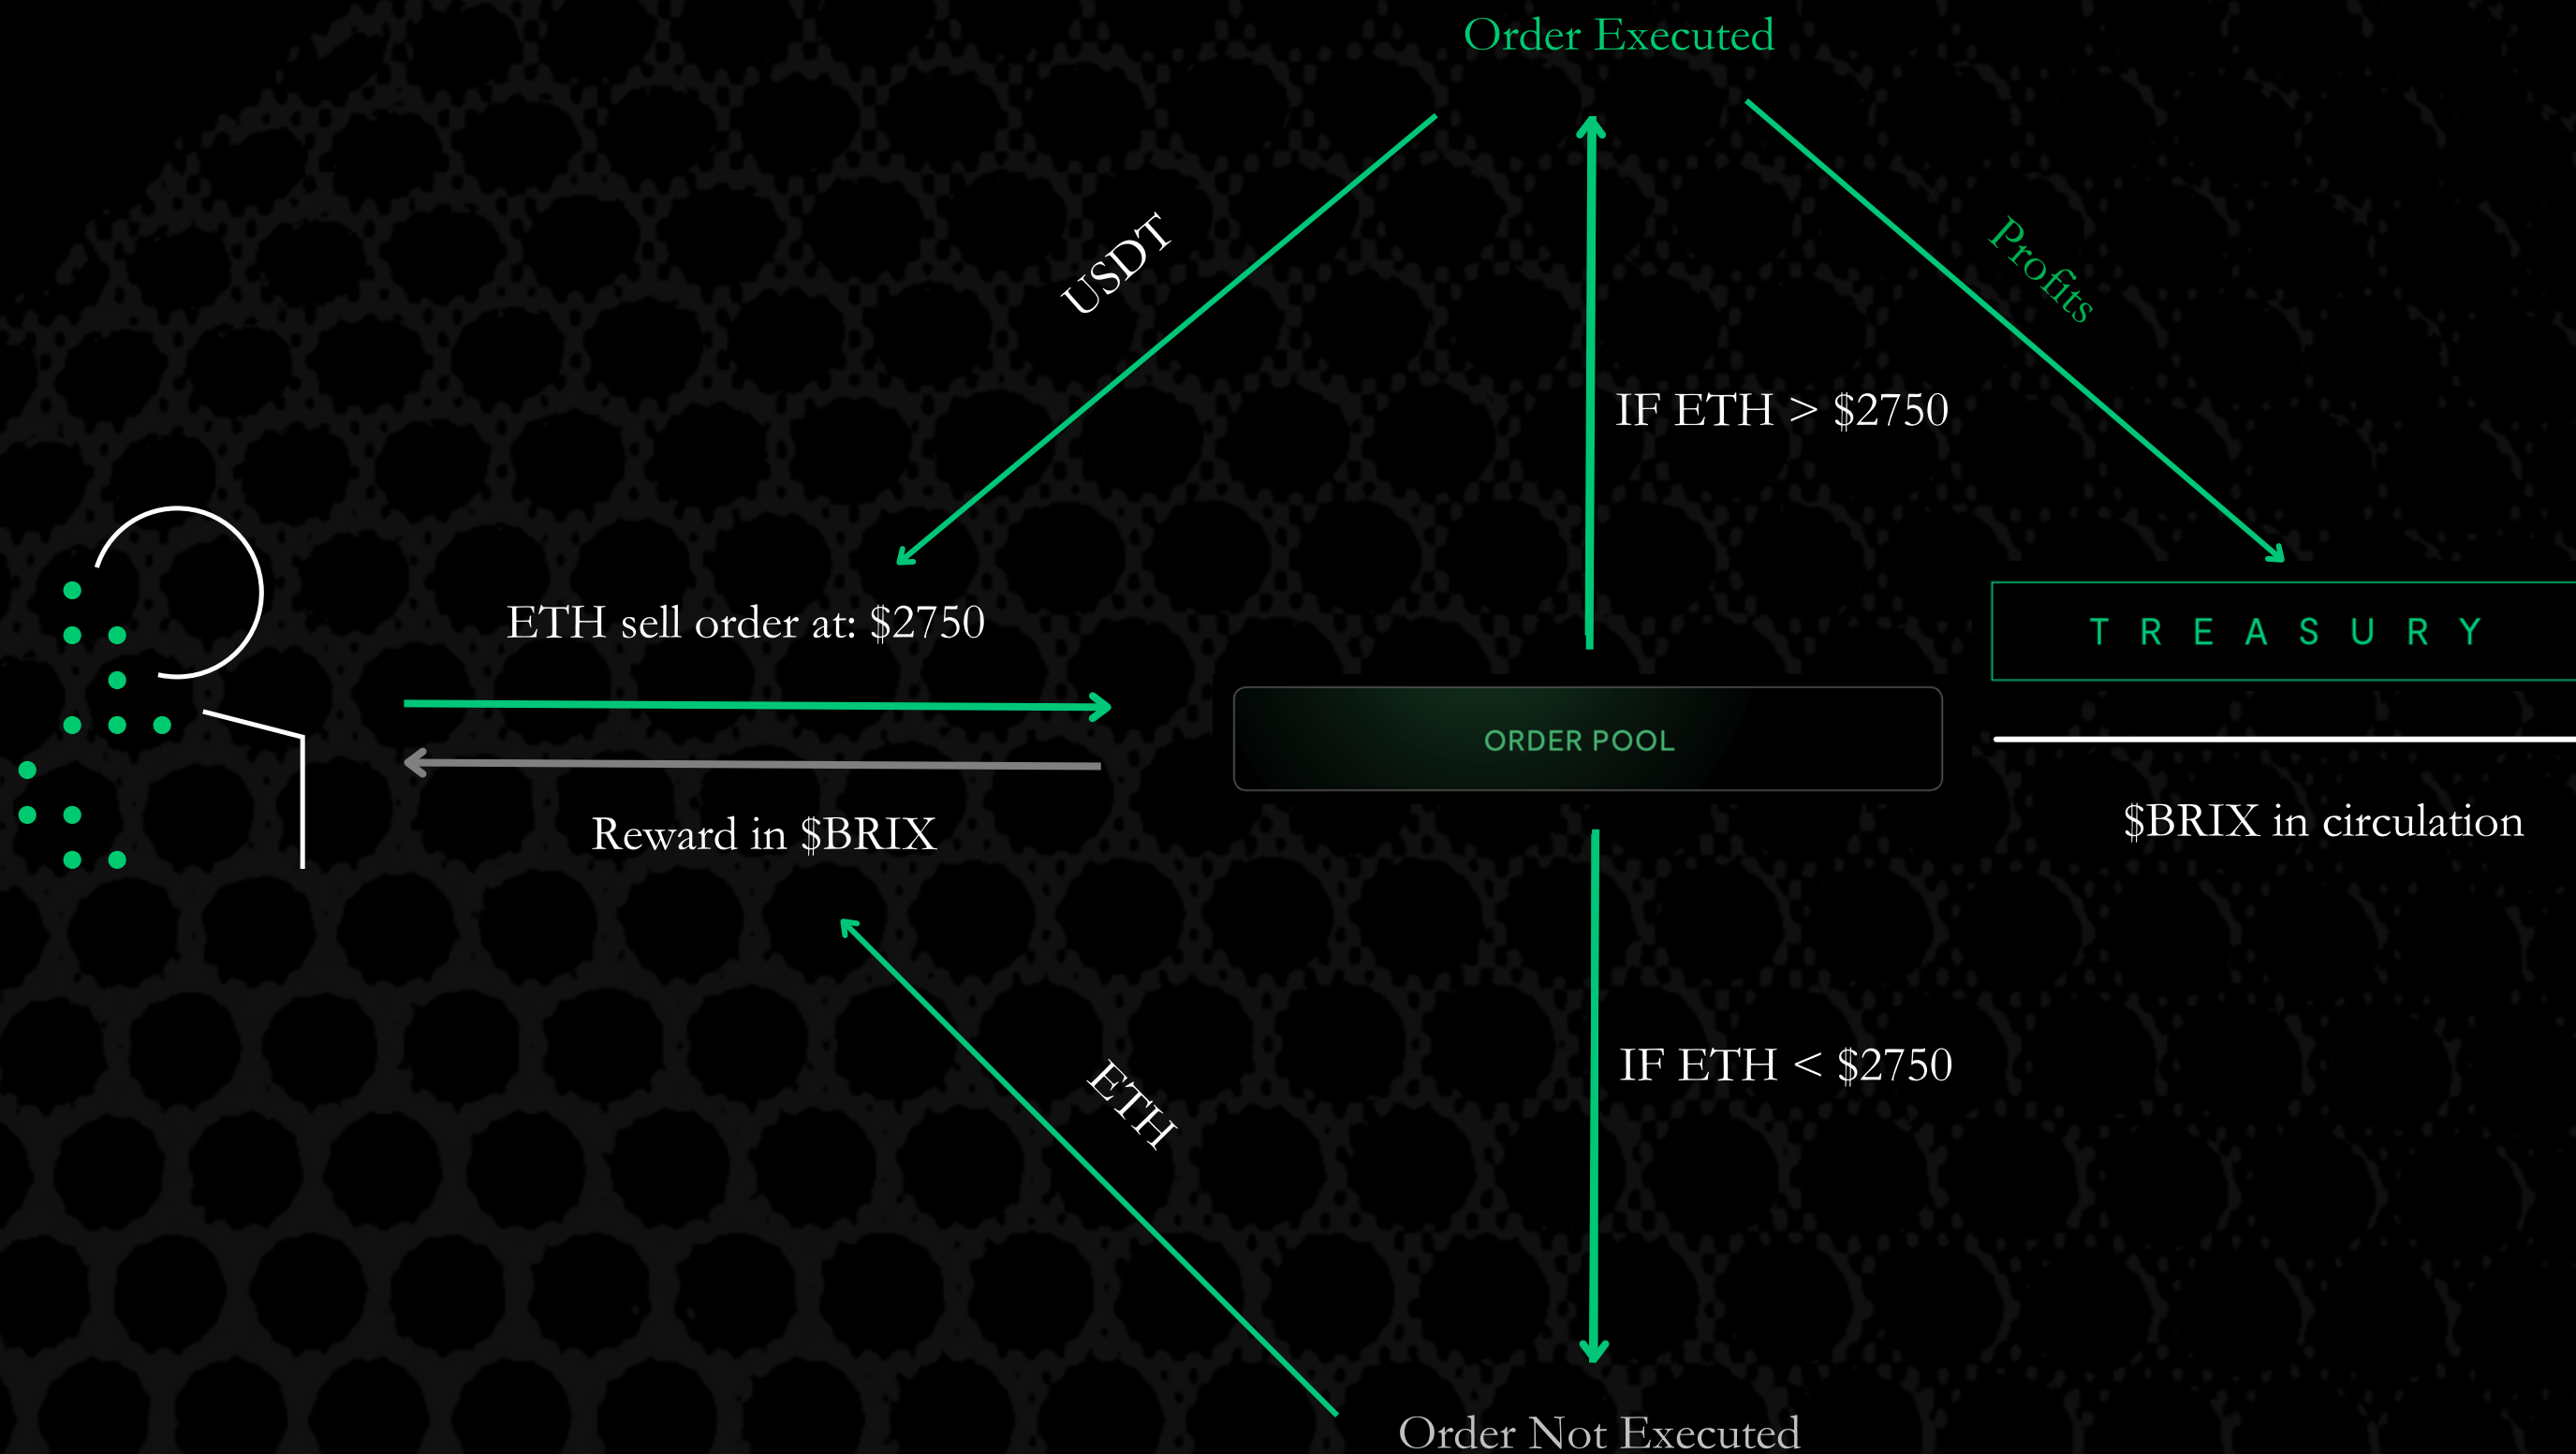

We have developed a new consensus mechanism designed specifically for Web3 liquidity providers. The protocol autonomously mints cryptocurrency (\$BRIX) as a reward for users who take on market exposure by locking their assets in conditional smart contracts. The minted \$BRIX is algorithmically stabilized by the Protocol Reserve.

TREASURY

Funded by the algorithmic execution surplus generated by the BS.AI engine.

Treasury-Backed Value

TBV is the ratio of Treasury assets value to circulating \$BRIX

[Learn more about \\$BRIX value creation...](#)

\$BRIX TOKENOMY

Fair launch!

Tokens are minted exclusively from placing orders—no pre-mining or early allocations

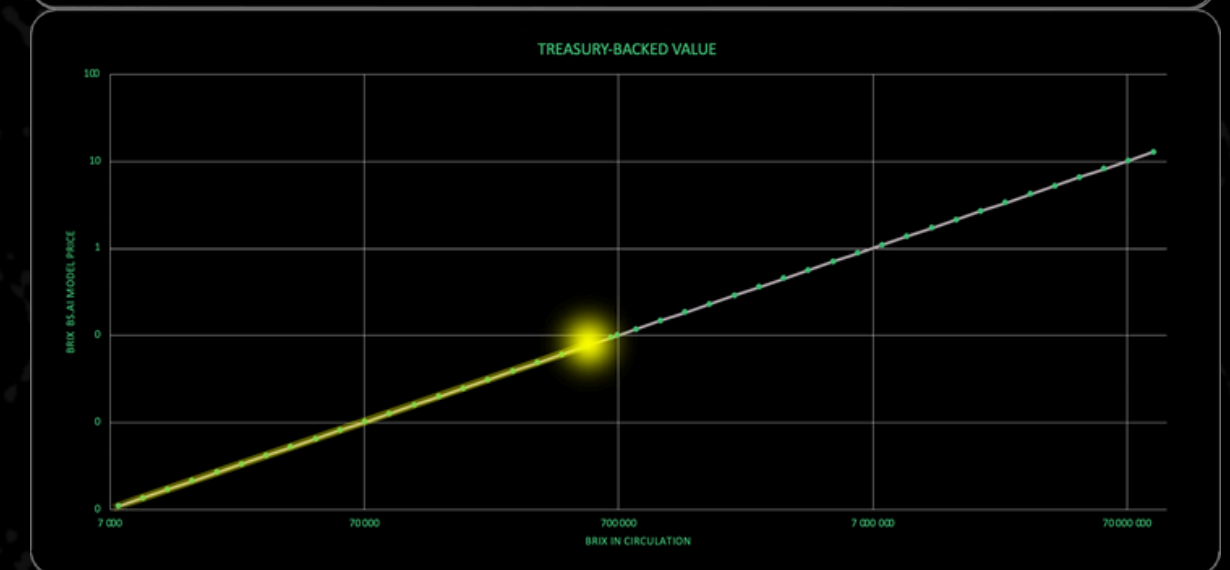

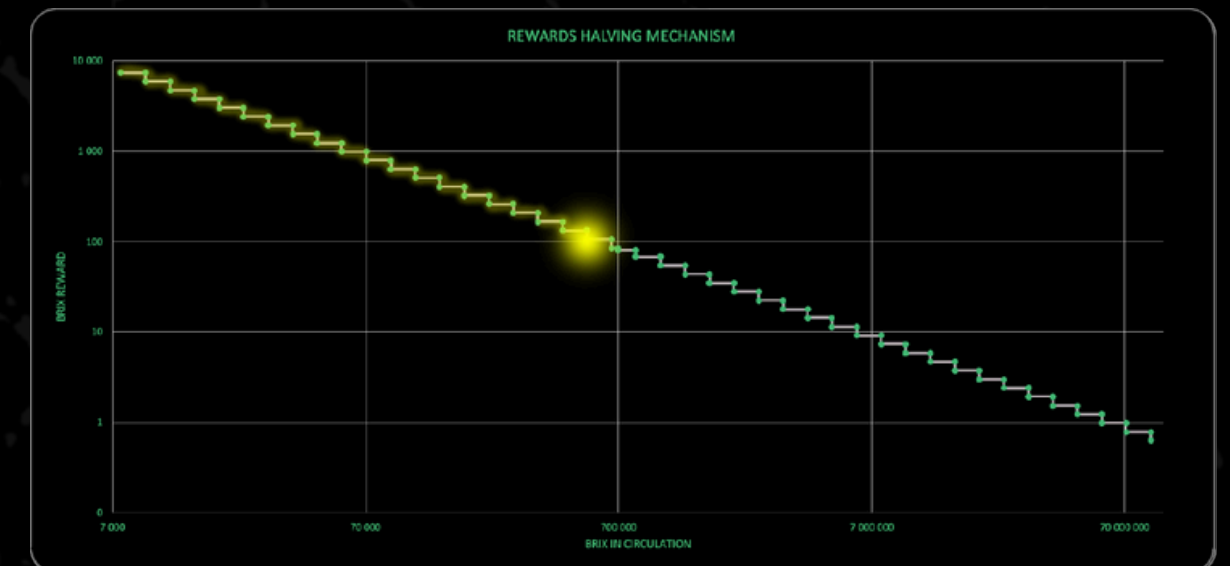

Initial Supply	0
Halving Stages	45
Halvings' Supply	88 888 888
Current Supply	1 128 888
Actual Treasury	\$41 053
Actual TBV*	\$0,032

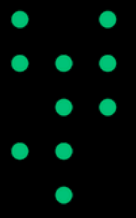

* Treasury Backed Value of 1\$BRIX

Supply mining occurs by placing free ETH / USD limit orders that earn \$BRIX

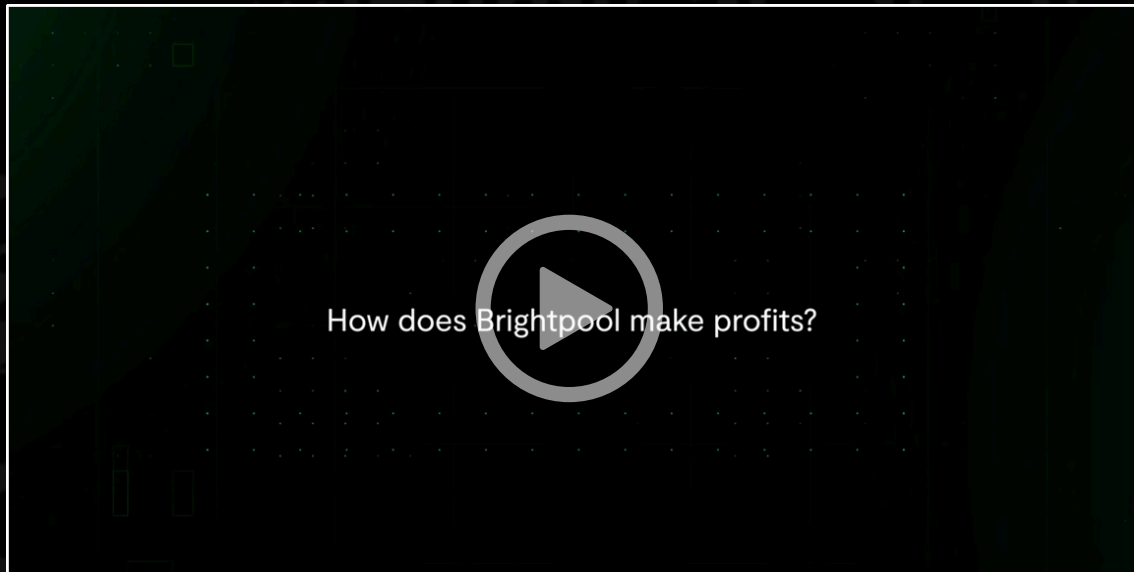

TBV performance

Fewer \$BRIX are minted per order over time, increasing the value per \$BRIX

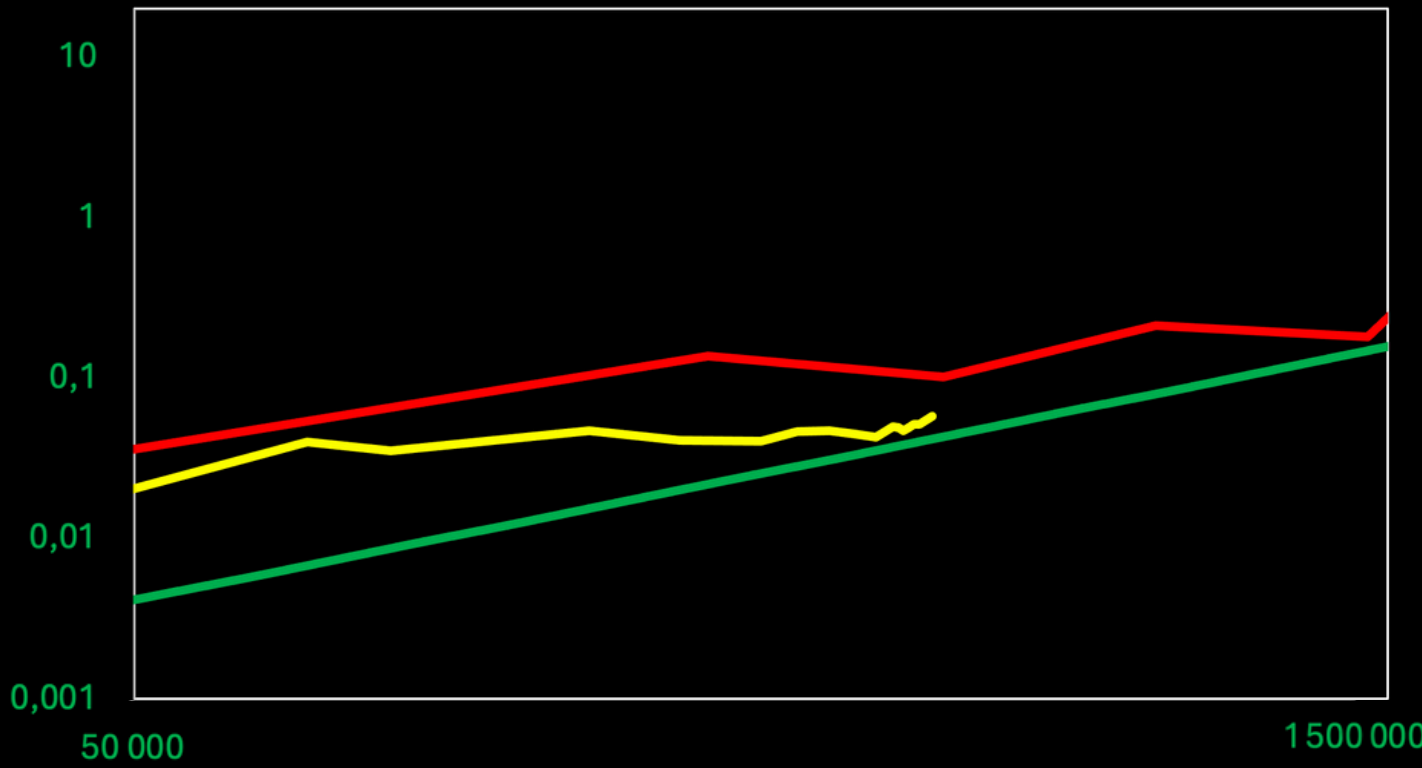

SELF-FULFILLING PROPHECY

TREASURY-BACKED VALUE

Testnet and live results compared to TBV predictions for mined BRIX

\$BRIX Treasury-Backed Value

- From 0.5c to 44c on testnet
- From 0.5c to 4.9c live so far
- TBV projection

THE SAGA

We are here: MVP at 22nd stage

Leverage available

IDO: \$BRIX = \$1

First B2B partnership

Swaps from Treasury as a service

1 000 000 \$BRIX

88 888 888 \$BRIX

888 888 888 \$BRIX

- Rewards Halving Mechanism
- \$BRIX minted by placing limit orders on ETH/USDt

- Parametric Price Locks: 1 \$BRIX freezes 1ETH price for 24h
- Limit Orders with Yield, fixed rewards
- \$BRIX price tied to ETH volatility

- \$BRIX buybacks to pay for Limit Order rewards
- Parametric Price Locks - fixed price

NEW TOKENS COMING ...

TECHNOLOGY

Arbitrum One Blockchain Decentralised Exchange

Built on a software stack in Rust and powered by BS.AI engine.

The AI-driven system (BS.AI)® calculates reward prices using on-chain data and the Black-Scholes model.

Trading assets are securely stored as NFTs in your wallet, separate from main funds until execution.

DAO (Decentralized Autonomous Organization)

\$BRI TOKEN

\$BRI is a governance token, granting voting power to holders. Through the Traffic Rate mechanism, holders can boost order rewards by up to 30% by exchanging \$BRI for \$BRIX at a 1:1 ratio. This reward boost feature, along with the ability to use \$BRI tokens for cryptocurrency swaps from the Treasury, will be introduced in the near future.
